

## New Myson LST range includes narrowest model on UK market

Myson's new Low Surface Temperature (LST) radiator range includes the narrowest Panel LST model available on the UK market. At just 420mm in width, it allows the specifier to make the most of available wall space, while maximising safety, reliability and aesthetics. The new 420mm model comes in three heights; 650mm, 850mm and 950mm, allowing it to be fitted in a range of locations.

The comprehensive range of sizes suits all applications, in either LST Super or LST Super Plus model options. Myson LST radiators also come with an 'A' rated thermostatic radiator valve for maximum energy efficiency.

The Myson LST casing provides full coverage of the heating element and pipework, eliminating the risk of burns from over hot pipes; and fully complies with NHS Estates Health Guidance Notes 1998. The LST Super has a depth of just 107mm, taking up the least amount of space in the room while emitting ample comfort heating with a maximum surface temperature of 43°C, in line with NHS guidelines. The slightly deeper LST Super Plus has a modest depth of just 157mm.

The entire Myson LST range benefits from a smooth, rounded casing which has no sharp edges, making this LST extremely safe for the elderly, infirm and very young in a multitude of applications; from hospitals and care homes to nurseries, sports halls and special needs schools. Painted in a high quality durable white finish, its elegant appearance also makes it the perfect choice for domestic use in children's rooms, retirement accommodation and sheltered housing.
